Tell us a little about the mobile device strategy for your school

We had recently acquired a fleet of Chromebooks that were purchased in a rapid response to the school needing to close due to COVID-19. The students needed to be able to take the Chromebooks home with them, to carry on with their lessons in a homeschooling environment.

Devices: Chromebooks

What challenges did you need to solve?

We acquired the Chromebooks in order to implement a distance learning model. However, the Chromebooks needed to abide by our ePolicies which was challenging to implement with the devices existing off premises.

How did Mobile Guardian help you solve this challenge?

We reached out to Mobile Guardian and booked an online demo with them. The team was incredibly helpful. Understanding the urgency and time pressure, they set us up with an account very quickly! We use their comprehensive Web-Filtering to ensure that all our students and devices are protected from harmful and inappropriate online content, and that they honour our school's ePolicy. We also will make use of geo-tracking to help us recover any devices at the end of the term. Their classroom tools have also allowed us to keep students on track during their remote lessons.

What stands out about your experience?

Mobile Guardian has exceeded our expectations. With this system, we now have geo-tracking and real time web activity monitoring capability that will allow us to keep students on task, to know where students are at all times and to recover all devices at the end of the school term. I especially appreciate the strong and knowledgeable technical support provided by Dave and his team who was instrumental in walking us through the process and is providing step by step solutions to our problems as we are becoming more proficient in managing the Mobile Guardian software ourselves.

Our Report Card

"I highly recommend this to any educational institution that is considering using this product."
